WIRED IT

V 3.1.29

THE PRIORITY

Degenerative
neuromuscular
diseases, ischemic
or **traumatic**
injuries causes
paralysis and
communications
problems

THE SOLUTION

Mental joystick

Braincontrol is a breakthrough technology that gives disabled people the power to control objects with their minds

NeuroHeadset

Commercially available EEG dry sensors and wireless connection.

BCI Control Unit

Running on a tablet device. Maps specific thoughts and drives the actuators for specific applications.

Target devices

Wheelchair, domotic system, etc. (Controlled by actuators if needed).

Communicator

Domotic control

Wheelchair and Robotics

HOW IT WORKS

Brain-Computer Interface

Artificial Intelligence

CLINICAL VALIDATION

125

✓ trainings
completed

500+ informal trainings

Multicentric
clinical study

✓ Protocol defined

64

Healthy users

All trainings completed **successfully**

61

Patients (59 with ALS, 9 other pathologies)

Early stage

- 8 **successfully**

Advanced stage

- 14 **successfully**

LIS:

- 27 **successfully**

CLIS:

- 9 **successfully**
- 3 **failed**

COMPETITIVE ADVANTAGE

First CE medical device
in the market based on
BCI technology

PATENT

N.IT102015000052009

PCT/IB2016/055442

Class I medical device

Braincontrol[®]

It fills a technological void for LIS patients

Core solution of a future bio-feedback framework based on machine learning techniques for human-computer interaction

TECHNOLOGY BEHIND

Interaction methods
(BCI and more ...)

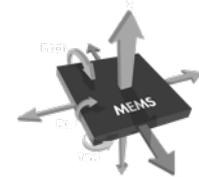

Eye Tracking

Microphone

Camera

Motion sensor

Touch

Training

Machine Learning

Classifier model

Innovative
